

VA 520 - Inline flow meter

Modbus-RTU output

4...20 mA output for present flow

Pulse output for total flow (counter reading), galvanically isolated or M-Bus (optionally)

NEW: Integrated pressure sensor (optional)

Measuring unit can be unscrewed: Removal of the entire measuring section not necessary, no by-pass necessary

Display head rotatable by 180° e.g. in case of reverse flow direction

Display shows 2 values at the same time:

- Present flow in m³/h, CFM,...
- Total consumption (counter reading) in Lm³/ CF
- Temperature measurement

Readout values in the display can be rotated by 180°, e.g. for overhead installation

Easy installation into the existing pipeline due to integrated measuring section and welded neck flange (according to EN 1092-1 PN 40)

High measuring accuracy via the integrated measuring section defined measuring section (inlet and outlet section)

The sensor can be removed and cleaned

With a key stroke:

- Reset counter reading
- Select units
- Zero-Point adjustment, leak flow volume suppression

Option:

Bi-directional measurement. Blue or green arrows in the display indicate the direction of flow.

A meter reading is available for each flow direction.

Application-technological features of the flow meters VA 520:

- Digital interfaces such as Modbus-RTU, Ethernet (PoE) and M-Bus enable connection to higher-level systems such as energy management systems, building management systems, PLC,...
- Easy and cost-effective installation
- Units freely selectable via keys on the display CF, lbs, CFM
- Compressed air counter up to 1,999,999,999 m³ can be reset to "zero" via keypad
- Analog output 4...20 mA, pulse output (electrically isolated)
- High measuring accuracy even in the lower measuring range (ideal for leakage measurement)
- Negligible pressure loss
- Calorimetric measuring principle, no additional pressure and temperature measurement necessary, no mechanically moved parts
- Comprehensive diagnostic functions can be read out on the display or remote access via Modbus-RTU such as exceeding max./min values °F, calibration cycle, error codes, serial number. All parameters can be read out and changed via Modbus
